

# Installation

The SDK currently supports Python 3.5+. The [requests](#) package is required.

We recommend using [pip](#) and [virtualenv](#) to install the SDK. Please note that the SDK's Python package is called **facebook-sdk**.

## Installing from Git

For the newest features, you should install the SDK directly from Git.

```
virtualenv facebookenv
source facebookenv/bin/activate
pip install -e git+https://github.com/mobolic/facebook-
sdk.git#egg=facebook-sdk
```

## Installing a Released Version

If your application requires maximum stability, you will want to use a version of the SDK that has been officially released.

```
virtualenv facebookenv
source facebookenv/bin/activate
pip install facebook-sdk
```
